Appendix E	Baseline Environmental Monitoring Schedule
Appendix F	1-hour TSP Baseline Monitoring Results
Appendix G	Graphical Presentation of Baseline 1-hour TSP Levels
Appendix H	Calibration Certificates for Noise Monitoring Equipment
Appendix I	Day-time 07:00-19:00hrs Baseline Noise Monitoring Data
Appendix J	Evening-time 19:00-23:00hrs and Holidays 07:00-19:00hrs Baseline
	Noise Monitoring Data
Appendix K	Night-time 23:00-07:00hrs of the next day Baseline Noise Monitoring
	Data
Appendix L	Graphical Presentation of Baseline Noise Levels

- E.1. This Baseline Air Quality and Noise Monitoring Report is prepared by Ka Shing Management Consultancy Ltd for Contract for Provision of Environmental Team consultancy for Design and Construction of Kong Nga Po Police Training Facilities (Programme no. 279LP) Quotation No. PMB202/8480/2022/A01/A (hereinafter called the "Contract"). This report presents the baseline air quality and noise monitoring data.
- E.2. Based on Section 2.2.6 and 3.2.4 of the approved EM&A Manual, when insufficient baseline monitoring data or questionable results are obtained, the ET should liaise with the IEC to agree on an appropriate set of data to be used as a baseline reference and submit to EPD for approval.
- E.3. Concurrent 2 projects named Proposed Organic Waste Treatment Facilities Phase 2 (OWTF2), Columbarium Crematorium and Related Facilities at Sandy Ridge respectively are near Police Facilities in Kong Nga Po. The results of the baseline, if ET conducts, are questionable as a result. With reference to the abovementioned sections of approved EM&A Manual for this Project, previous appropriate set of data collected and done by previous ET to be used as a baseline reference and submitted to EPD for approval.

Air Quality

E.4. The baseline air quality monitoring for the parameters of 1-hour Total Suspended Particulates (TSP) conducted at AM1 and AM2 as presented in

Monitoring	Location	Baseline Monitoring Period
Stations		
AM 1	Village House, Kong Nga Po	19th March to 1st April 2020
AM 2	Village House, Kong Nga Po	

Table 1. Baseline Air Quality Monitoring Period

E.5. Based on the records done by previous ET, there was no major dust generating activities undertaken in the vicinity of the monitoring stations. Data collected was reviewed and analysed to determine the Action and Limit Levels for air quality during impact monitoring throughout the entire construction work period. Details of the methodology, locations and results are presented in this report.

Noise

E.6. The baseline noise monitoring works for parameters of construction noise conducted at the designated Noise Monitoring Stations NM9, NM10, NM11, NM12, NM13 and NM14 are suitable and adopted for this project as presented in Table II.

Monitoring	Location	Baseline Monitoring Period
Stations		
NM 9	Village House, Kong Nga Po	19th March to 1st April 2020
NM 10	Village House, Kong Nga Po	19th March to 1st April 2020
NM 11	Village House, Kong Nga Po	20th March to 2nd April 2020
NM 12	Village House, Kong Nga Po	20th March to 2nd April 2020
NM 13	Village House, Kong Nga Po	19th March to 1st April 2020
NM 14	Village House, near Man Kam To Road	19th March to 1st April 2020

Table 2 Baseline Noise Monitoring Period

E.7. Based on baseline report done by previous ET, noise Levels at designated monitoring stations were measured continuously for 24 hours for a period of 14 days. Monitoring data collected was reviewed and analysed. Details of the locations and results are presented in this report. The baseline noise monitoring data was processed according to the following periods.

Day time: 0700-1900 hrs on normal weekdays Evening-time: 1900-2300 hrs Holiday-time: 0700-1900 hrs on holidays Night-time: 2300-0700 hrs of next day

#### 1. INTRODUCTION

#### Project Background

1.1. The Project comprises of approximately 22 nos. buildings and the building height varies from single storey to 5 storeys. The Master Layout Plan of the Project is shown in Appendix A. The construction at Kong Ngo Po will be carried in phases:

Section 1

- (a) Re-provisioning of the existing Police Driving and Traffic Training Centre ("PD & TTC") at Fan Garden (FG) in Fanling at Kong Nga Po (KNP) site;
- (b) Re-provisioning of the existing Weapon Training Facilities ("WTF") at FG in Fanling at KNP site;

Section 2

(c) Re-provisioning of the existing 300m Baffle range with 20 firing points and a helipad at the Lo Wu Firing Rang (LWFR) at KNP site;

(d) Re-provisioning of the existing 25m Baffle range with 6 firing points at the Ma Tso Lung Firing Range (FMTLFR) at KNP site; and

(e) Design and construction of the proposed Special Operation Training Facilities (SOTF).

- 1.2. The Project is a Designated Project under the Environmental Impact Assessment Ordinance (EIAO). An Environmental Impact Assessment (EIA) Report for the Project was approved under EIAO in October 2016 in accordance with the EIA Study Brief (No. ESB-276/2014) and the Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM). The corresponding Environmental Permit was issued (Environmental Permit No. FEP-01/510/2016) by the Director of Environmental Protection (DEP) in February 2023.
- 1.3. The Project comprises of approximately 22 nos. buildings and the building height varies from single storey to 5 storeys. The construction at Kong Ngo Po will be carried in 2 phases (section 1 & 2). Appendix B shows the updated construction programme. The milestones of environmental protection / mitigation activities are shown in Appendix C. As such, an air quality and noise monitoring programme is recommended in the approved Environmental Monitoring and Audit (EM&A) Manual during the construction phases of this Project to monitor the dust and noise nuisances. In order to establish the background conditions of the designated sensitive receivers, a baseline air quality

and noise monitoring programme is therefore proposed.

1.4. Ka Shing Management Consultant Ltd was commissioned by the Architectural Services Department (ASD) as the Environmental Team to undertake the Environmental Monitoring and Audit (EM&A) works for the Project of Police Facilities in Kong Nga Po under Environmental Permit No. FEP-01/510/2016 to prepare a Baseline Air Quality and Noise Monitoring Report.

Purpose of Baseline Air Quality and Noise Monitoring Report

1.5. The purpose of this "Baseline Air Quality and Noise Monitoring Report" (the "Report") is to set out baseline levels for the air quality and noise in accordance with the EM&A Manual of the Project. Based on baseline report done by previous ET, these baseline levels will be used as the basis for the impact and compliance monitoring during the coming construction period of the Project. This report presents the monitoring locations, equipment, period, methodology, previous data for air quality and noise during the baseline period.

#### 2. AIR QUALITY MONITORING

#### Monitoring Requirements

- 2.1. According to Section 2.2.6 of the EM&A manual, baseline monitoring shall be conducted to determine the ambient 1-hour TSP levels at all designated monitoring locations to provide data for the determination of the appropriate Action levels (ALs) with the Limit levels (LLs) set against statutory or otherwise agreed limits.
- 2.2. With reference to Section 2.2.6 of the approved EM&A Manual, when insufficient baseline monitoring data or questionable results are obtained, the ET should liaise with the IEC to agree on an appropriate set of data to be used as a baseline reference and submit to EPD for approval.
- 2.3. Concurrent 2 projects named Proposed Organic Waste Treatment Facilities Phase 2 (OWTF2), Columbarium Crematorium and Related Facilities at Sandy Ridge respectively are near Police Facilities in Kong Nga Po. The results of the baseline, if ET conducts, are questionable as a result. With reference to the abovementioned sections of approved EM&A Manual for this Project, previous appropriate set of data collected and done by previous ET to be used as a baseline reference and submitted to EPD for approval.
- 2.4. Based on previous baseline report done by ET, general meteorological conditions (wind speed, direction and precipitation) and notes regarding any significant adjacent dust producing sources are extracted for this report.

**Monitoring Locations** 

2.5. According to Section 2.2.5 of the EM&A manual, two designated air monitoring stations are listed in Table 2.1 and their locations shown in Figure 1.

	Monitoring Stations	Location
AM1		Village House, Kong Nga Po
AM2		Village House, Kong Nga Po

Table 3 Air Quality Monitoring Stations

Monitoring Equipment

- 2.6. Based on previous baseline report done ET and information are extracted and presented for this report, direct reading dust meter was used to measure 1-hour average TSP levels. Sufficient information on the dust meter was provided to prove its capability to achieve comparable result with HVS. The 1-hour sampling was determined by HVS to check the validity and accuracy of the results measured by direct reading method prior to baseline air quality monitoring.
- 2.7. Meteorological information was extracted from "Hong Kong Observatory Ta Kwu Ling Weather Station" as the alternative method to obtain representative wind data based on previous baseline report done ET and information are extracted and presented for this report. For Ta Kwu Ling Weather Station, it is located nearby the Project site and situated at approximately 15m above mean sea level. The station's wind data monitoring equipment is set above the existing ground ten meters in compliance with the general setting up requirement. Furthermore, this station also provides other meteorological information, such as the humidity, rainfall, air pressure and temperature etc. The general meteorological conditions and the meteorological data at Ta Kwu Ling Weather Station is presented in Appendix D.
- 2.8. Based on previous baseline report done ET and information are extracted and presented for this report, Table 4 summarizes the equipment to be used in the baseline air quality monitoring programme. Copies of calibration certificates are attached in Appendix D.

Monitoring Station(s)	Monitoring Equipment		Quantity
31411011(5)			
AM1, AM2	1-hour TSP Dust Meter	AEROCET-831	6

Table 4Air Quality Monitoring Equipment

Monitoring Parameters, Frequency and Duration

2.9. Table 2.3 summarizes the monitoring parameters and frequencies of baseline air quality monitoring.

Table 5	Baseline Air C	Quality Mon	itoring Paramet	ers, Frequency	and Duration
---------	----------------	-------------	-----------------	----------------	--------------

Monitoring Stations	Parameter	Period	Frequency
AM1, AM2	1-hour TSP	0700 – 1900 hrs	3 times per day

Monitoring Methodology and QA/QC Procedure

#### Instrumentation

2.10. Direct reading dust meter was deployed for the air quality monitoring as shown in Table 4 based on previous information of baseline report done ET, information are extracted and presented for this report. The measuring procedures of the 1-hour dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

#### (AEROCET-831)

- The 1-hour dust meter is placed at least 1.3 meters above ground.
- Remove the red rubber cap from the AEROCET-831 inlet nozzle.
- Turn on the power switch that is located on the right side of the AEROCET-831.
- On power up the product intro screen is displayed for 3 seconds. The intro screen displays the product name and firmware version.
- Then the main counter screen will be displayed.
- Press the START button. Internal vacuum pump start running. After 1 minute the pump will stop and the 0.5  $\mu$  m and 5  $\mu$  m channels will show the cumulative counts of particles larger than 0.5  $\mu$  m and 5  $\mu$  m per cubic foot.
- The AEROCET-831 is now checked out and ready for use.
- To switch off the AEROCET-831 power to stop the measuring after 1 hour sampling.
- Information such as sampling date, time, and display value and site condition were recorded during the monitoring period.

#### Maintenance/Calibration

2.10 The following maintenance/calibration is required for the direct dust meters. Checking and calibrating the meter by HVS check the validity and accuracy of the results measured by direct reading method prior to the commencement of the baseline monitoring. Dust meter would be checked and calibrated at bi-monthly intervals throughout the air quality monitoring period, if necessary

#### **Results and Observations**

Results

2.11 Baseline air quality monitoring was conducted at two monitoring stations and

the detailed monitoring schedule is shown in Appendix E.

2.12 Based on previous information of baseline report done ET and extracted for this report, the monitoring data are summarized in Table 6. All monitoring data and graphical presentations of 1-hour TSP can be referred to Appendix F and G. Detailed weather condition during the baseline monitoring period are shown in Appendix C.

	- · · · · · · · · · · · · · · · · · · ·
Monitoring Stations	Average TSP Concentration, µg/m3 (Range)
AM1- Village House,	89.3
Kong Nga Po	(51.8 – 207.3)
AM2- Village House,	94.5
Kong Nga Po	(42.7 – 159.8)

 Table 6
 Summary of Baseline 1-hour TSP Monitoring Results

#### Observations

2.13 The weather was generally sunny or cloudy during the baseline monitoring period based on previous information of baseline report done ET and extracted for this report. During the baseline air quality monitoring period, the influencing factors which may affect the results are summarized in Table 7.

Tabla 7	Influencing Feator of		Nanitaring Stations
	Influencing Factor a

0	· · · · · · · · · · · · · · · · · · ·
Monitoring Stations	Influencing Factors
AM1- Village House, Kong Nga Po	N/A
AM2- Village House, Kong Nga Po	Loading & unloading activities at
	nearby open storage warehouse

Action and Limit Levels

2.14 The baseline monitoring results form the basis for determining the air quality criteria for the impact monitoring. Table 8 shows, based on previous information of baseline report done ET and extracted for this report, the criteria for establishing the Action and Limit Levels for air quality monitoring. Should non-compliance of the air quality criteria occur, actions in accordance with the Event and Action Plan in Table 5 of the EM&A manual shall be carried out.

Table 8Action and Limit Levels for Air Quality during Construction Period

Parameter	Action Level (μg/m <sup>3</sup> )	Limit Level (µg/m³)		
1-hr TSP	● If Baseline Level ≤ 384:	500		

Level in $\mu$	Action Level = (130% of Baseline Level	
g/m <sup>3</sup>	+ Limit Level) / 2	
	• If Baseline level > 384:	
	Action Level = Limit Level	

2.15 Following the above guidelines, the Action and Limit Levels for 1-hour TSP impact monitoring have been set, as presented in Table 9

Table 9Calculated Action and Limit Levels for 1-hour TSP

Monitoring Stations	Action Level (µg/m <sup>3</sup> )	Limit Level (µg/m <sup>3</sup> )
AM1	308	500
AM2	311	

#### 3. NOISE MONITORING

#### Monitoring Requirements

- 3.1. According to Section 3.2.4 of the EM&A manual, baseline noise monitoring shall be conducted daily in all of the identified monitoring stations. There shall not be any construction or noise generating activities in the vicinity of the monitoring stations.
- 3.2. Based on Section 3.2.4 of the approved EM&A Manual, when insufficient baseline monitoring data or questionable results are obtained, the ET should liaise with the IEC to agree on an appropriate set of data to be used as a baseline reference and submit to EPD for approval.
- 3.3. Concurrent 2 projects named Proposed Organic Waste Treatment Facilities Phase 2 (OWTF2), Columbarium Crematorium and Related Facilities at Sandy Ridge respectively are near Police Facilities in Kong Nga Po. The results of the baseline, if ET conducts, are questionable as a result. With reference to the abovementioned sections of approved EM&A Manual for this Project, previous appropriate set of data collected and done by previous ET to be used as a baseline reference and submitted to EPD for approval.

Monitoring Locations

3.4. With reference to the principle of EIA report of the Project, construction noise monitoring station should be provided at the Noise Sensitive Receivers within 300 m from the boundary of this Project. According to Section 3.2.3 of the EM&A manual, six designated noise monitoring stations are related within 300 m from the boundary of this Project in Table 10 and their location shown in Figure 2.

NM 13	Village House, Kong Nga Po		
NM 14	Village House, near Man Kam To Road		

Table 10	Noise Monitoring Stations
----------	---------------------------

Monitoring Equipment

3.5. Integrating Sound Level Meter was used for baseline noise monitoring based on previous information of baseline report done extracted for this report, the meters are Type 1 sound level meter capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level (Leg) and percentile sound pressure level (Lx) that also complied with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. Table 11 summarizes the noise monitoring equipment being used. Copies of calibration certificates are attached in Appendix B1.

	y Lyupment	
Equipment	Model and Make	Quantity
Integrating Sound Level Meter	SVAN 957 / 977 and BSWA 801 / 308	14
Calibrator	SV30A	1

#### Table 11 Noise Monitoring Equipment

Monitoring Parameters, Frequency and Duration

- 3.6. In accordance with the EM&A Manual and previous baseline report extracted and presented for this report, continuous baseline noise monitoring in terms of the 30-minute A-weighted equivalent sound pressure level (LAeg (30-min)) was carried out daily at all of the identified monitoring stations for the time period between 0700-1900 hours on normal weekdays at least 2 weeks prior to the commissioning of the construction works. Supplementary information for data auditing and statistical results such as L10 and L90 were obtained for reference. For all other time periods, (LAeq (5-min)) was employed for comparison with the Noise Control Ordinance (NCO) criteria. Data obtained from the baseline noise monitoring was processed and presented according to the following three periods:
- Daytime: 0700-1900 hrs on normal weekdays
- Evening time on all days (1900-2300 hrs) and Holidays (including Sundays)
- during the daytime and evening (0700-1900 hrs)
- Night-time: 2300-0700 hrs of next days
- 3.7. The frequency and parameters of noise measurement are presented in Table 12

Table 12 Summary of Night-Time Noise Monitoring Results					
Monitoring	Time Period	Interval,	Parameter		
Stations		min			
NM9,	Daytime on normal weekdays (0700-1900	30 min	Leq, L10		

NM10,	hrs)		& L90
NM11,	Evening time on all days (1900-2300 hrs)	5 min	
NM12,	and Holidays (including Sundays) during		
NM13,	the daytime and evening (0700 - 1900 hrs)		
NM14	All days during the night-time (2300- 0700		
	hrs)		

Monitoring Methodology and QA/QC Procedure

- 3.8. The monitoring procedures are as follows:
  - The monitoring stations was normally be set at 1m away from the exterior building façade of the sensitive receivers and at a position of 1.2m above the ground.
  - For free field measurement, the meter was positioned away from any nearby reflective surfaces. Free field noise levels was adjusted with a correction of +3 dB(A). The battery condition was checked to ensure the correct functioning of the meter.
  - Parameters such as frequency weighting, the time weighting and the interval was set as follows:
    - Frequency weighting : A
    - Time weighting : Fast

- Interval : 30 minutes (Leq (30-min) would be determined for daytime noise by calculating the logarithmic average of six Leq (5min) data)

- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement will be more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- At the end of the monitoring period, the Leq, L90 and L10 was recorded. In addition, noise sources were recorded on a standard record sheet.
- Noise monitoring was carried out continuously for 24 hours during the 14 days baseline monitoring period. Monitoring data was recorded and stored automatically within the sound level meter system. At the end of the monitoring period, noise levels in term of Leq, L90 and L10 were recorded. In addition, site conditions and noise sources were recorded when the equipment were checked and inspected every day.
- All the monitoring data within the sound level meter system was downloaded through the computer software, and all these data was checked and reviewed within the computer.

3.9. Table 13 summarizes the types of measurement undertaken in the six monitoring stations based on previous baseline report extracted and presented for this report.

Monitoring Station	Measurement
NM 9	Free field measurement
NM 10	Free field measurement
NM 11	Façade measurement
NM 12	Façade measurement
NM 13	Free field measurement
NM 14	Free field measurement

Table 13 Type of Measurement

Maintenance and Calibration

3.10. Information of previous baseline report are extracted and presented for this report. The microphone head of the sound level meter and calibrator was cleaned with a soft cloth at quarterly intervals. The sound level meter and calibrator was checked and calibrated at yearly intervals. Immediately prior to and following each noise measurement the accuracy of the sound level meter was checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

Results and Observations

Results

3.11. The baseline noise monitoring results are extracted from previous baseline report and presented in Table 14 to Table 16. All baseline noise monitoring results are given in Appendix J to K. Graphical presentations of the data are provided in Appendix L. Weather conditions recorded during the baseline monitoring period are shown in Appendix C.

Observations

3.12. The baseline noise monitoring results are extracted from previous baseline report and presented that the weather was generally sunny or cloudy during the baseline monitoring period. During the baseline noise monitoring period, the influencing factors which may affect the results are summarized in Table 17

Monitoring Station	Influencing Factors
NM 9	Road Traffic at Kong Nga Po Road and dog barking
NM 10	Dog barking
NM 11	N/A
NM 12	Loading and unloading activities at nearby open storage
	warehouse & dog barking
NM 13	Maintenance works within the premise
NM 14	Dog barking

 Table 17
 Influencing Factor at Noise Monitoring Stations

Action and Limit Levels

3.13. The Action and Limit Levels was established in accordance with the approved EM&A Manual. Table 18 presents the Action and Limit Levels for construction noise.

 Table 18
 Action and Limit Levels for Noise during Construction Period

Time Period	Action Level	Limit Level
0700 – 1900 hours	When one documented	75 dB(A)
on normal weekdays	complaint is received	

Notes: If works are to be carried out during restricted hours, the conditions stipulated in the Construction Noise Permit (CNP) issued by the Noise Control Authority have to be followed.

#### 4. REVISIONS FOR INCLUSION IN THE EM&A MANUAL

4.1. The baseline environmental monitoring was conducted according to the approved EM&A Manual for air quality and noise. The monitoring methodology, parameters monitored, monitoring locations and equipments are all in line with the approved EM&A Manual.

#### 5. CONCLUSIONS

- 5.1. The baseline environmental monitoring was carried out in accordance with the EM&A Manual and contract specification, in respect of the methodology, equipment, location and monitoring parameters.
- 5.2. According to previous ET report, the baseline air quality (1-hour TSP levels) monitoring was conducted at two monitoring locations (Stations AM1 and AM2) between 19th March and 1st April 2020. During the monitoring, some influencing factors (e.g. loading and unloading activities at nearby open storage warehouse) might affect the baseline dust monitoring results in the vicinity of the monitoring stations. The baseline air quality monitoring results done by previous ET were considered representative to the ambient air quality conditions of the respective sensitive receivers. The Action and Limit Levels for the air quality were established based on the baseline monitoring results.
- 5.3. Baseline noise monitoring was conducted at nine monitoring stations (Stations NM9, NM10, NM11, NM12, NM13 and NM14) between 14th March and 2nd April 2020 according to previous results of ET baseline report. The major noise sources identified at the monitoring stations were the noise from road traffic and dog barking. The baseline monitoring results are considered representative to the ambient noise level at all monitoring stations.

# Milestones of Environmental Protection / Mitigation Activities Annotated

EIA	EM&A	<b>Recommended Mitigation Measures</b>	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
Air Qual	ity Impact	- Construction Phase			
3.9.1	2.2	Dust Control Measures	Construction Dust	Contractor	Project construction site / Duration
		To achieve compliance with the FSP, RSP and TSP criteria during			of the construction phase / Prior to
		the construction phase, good practices for dust control should be			commencement of operation
		implemented to reduce dust impacts. The dust control measures			
		are detailed as follows:			
		➢ Use of regular water spraying (once every 1.25 hours or 8			
		times per day) to reduce dust emissions from heavy			
		construction activities (including ground excavation, earth			
		moving, etc.) at all active works area exposed site surfaces			
		and unpaved roads, particularly during dry weather.			
		➢ Covering 80% of stockpiling area by impervious sheets and			
		spraying all dusty material with water immediately prior to			
		any loading transfer operations to keep the dusty materials			
		wet during material handling at the stockpile areas.			
		Relevant dust control practices as stipulated in the Air Pollution			
		Control (Construction Dust) Regulation should be adopted:			
		Good Site Management			
		➢ Good site management is important to help reduce potential			

EIA	EM&A	<b>Recommended Mitigation Measures</b>	<b>Objectives of the</b>	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		air quality impact down to an acceptable level. As a general			
		guide, the Contractor should maintain high standards of			
		housekeeping to prevent emissions of fugitive dust.			
		Loading, unloading, handling and storage of raw materials,			
		wastes or byproducts should be carried out in a manner so			
		as to minimise the release of visible dust emission. Any piles			
		of materials accumulated on or around the work areas should			
		be cleaned up regularly. Cleaning, repair and maintenance			
		of all plant facilities within the work areas should be carried			
		out in a manner minimising generation of fugitive dust			
		emissions. The material should be handled properly to			
		prevent fugitive dust emission before cleaning.			
		Disturbed Parts of the Roads			
		> Main temporary access points should be paved with			
		concrete, bituminous hardcore materials or metal plates and			
		be kept clear of dusty materials; or			
		> Unpaved parts of the road should be sprayed with water or a			
		dust suppression chemical so as to keep the entire road			
		surface wet.			

EIA	EM&A	<b>Recommended Mitigation Measures</b>	<b>Objectives of the</b>	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		Exposed Earth			
		> Exposed earth should be properly treated by compaction,			
		hydroseeding, vegetation planting or seating with latex,			
		vinyl, bitumen within six months after the last construction			
		activity on the site or part of the site where the exposed earth			
		lies.			
		Loading, Unloading or Transfer of Dusty Materials			
		$\succ$ All dusty materials should be sprayed with water			
		immediately prior to any loading or transfer operation so as			
		to keep the dusty material wet.			
		Debris Handling			
		> Any debris should be covered entirely by impervious			
		sheeting or stored in a debris collection area sheltered on the			
		top and the three sides.			
		$\succ$ Before debris is dumped into a chute, water should be			
		sprayed onto the debris so that it remains wet when it is			
		dumped.			

EIA	EM&A	<b>Recommended Mitigation Measures</b>	<b>Objectives of the</b>	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		<ul> <li>Transport of Dusty Materials</li> <li>Vehicles used for transporting dusty materials/spoils should be covered with tarpaulin or similar material. The cover should extend over the edges of the sides and tailboards.</li> </ul>			
		<ul> <li>Wheel washing</li> <li>Vehicle wheel washing facilities should be provided at each construction site exit. Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels.</li> </ul>			
		Use of vehicles			
		<ul> <li>The speed of the trucks within the site should be controlled to about 10 km/hour in order to reduce adverse dust impacts and secure the safe movement around the site.</li> <li>Immediately before leaving the construction site, every</li> </ul>			
		vehicle should be washed to remove any dusty materials from its body and wheels.			
EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
----------	------------	--	-----------------------------	----------------	----------------------------------
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		> Where a vehicle leaving the construction site is carrying a			
		load of dusty materials, the load should be covered entirely			
		by clean impervious sheeting to ensure that the dusty			
		materials do not leak from the vehicle.			
		Site hoarding			
		> Where a site boundary adjoins a road, street, service lane or			
		other area accessible to the public, hoarding of not less than			
		2.4m high from ground level should be provided along the			
		entire length of that portion of the site boundary except for			
		a site entrance or exit.			
Noise Im	pact – Con	struction Phase			
4.4.6	3.2	Good Site Practice	Maintain good site practice	Contractor	Within the Project site / During
		Good site practice and noise management can significantly reduce	to minimise / avoid		construction phase / Prior to
		the impact of construction site activities on nearby NSRs. The	construction noise impact		commencement of operation.
		following package of measures should be followed during each			
		phase of construction:			
		> only well-maintained plant to be operated onsite and plant			

EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		should be serviced regularly during the construction works;			
		> machines and plant that may be in intermittent use to be shut			
		down between work periods or should be throttled down to			
		a minimum;			
		> plant known to emit noise strongly in one direction, should,			
		where possible, be orientated to direct noise away from the			
		NSRs;			
		> mobile plant should be sited as far away from NSRs as			
		possible; and			
		> material stockpiles and other structures to be effectively			
		utilised, where practicable, to screen noise from on-site			
		construction activities.			
4.4.6	3.2	Adoption of QPME	Minimise / avoid	Contractor	Within the Project site / During
		QPME should be adopted as far as applicable.	construction noise impacts to		construction phase / Prior to
			the surrounding NSRs		commencement of operation
4.4.6	3.2	Use of Movable Noise Barriers	Minimise / avoid	Contractor	Within the Project site / During
		Movable noise barriers should be placed along the active works	construction noise impacts to		construction phase / Prior to
		area and mobile plants to block the direct line of sight between	the surrounding NSRs		commencement of operation
		PME and the NSRs.			

EIA	EM&A	<b>Recommended Mitigation Measures</b>	<b>Objectives of the</b>	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
4.4.6	3.2	Use of Noise Enclosure/ Acoustic Shed	Minimise / avoid	Contractor	Within the Project site / During
		Noise enclosure or acoustic shed should be used to cover	construction noise impacts to		construction phase / Prior to
		stationary PME such as air compressor and generator.	the surrounding NSRs		commencement of operation
4.4.6	3.2	Use of Noise Insulating Fabric	Minimise / avoid	Contractor	Within the Project site / During
		Noise insulating fabric can also be adopted for certain PME (e.g.	construction noise impacts to		construction phase / Prior to
		pilling machine etc.).	the surrounding NSRs		commencement of operation.
Water Qu	ality Impa	ect – Construction Phase			
5.6.1.1	4.2	General Construction Activities	Maintain good site practices	Contractor	Within the Project site / During
		The following measures should be implemented:	to avoid pollution of water		construction phase
		> Construction waste, debris and refuse generated on-site	courses		
		should be stored or contained appropriately to prevent them			
		entering nearby watercourses or blocking stormwater drains.			
		> Regular off-site removal of these materials should be			
		maintained to minimise the volume of waste present on the			
		construction site at any one time.			
		> Stockpiles of construction materials such as cement and			
		excavated material should be covered when not in use to			
		reduce the potential for water pollution.			
		Construction Site Runoff	Minimise / control	Contractor	Within the Project site / During

EIA	EM&A	<b>Recommended Mitigation Measures</b>	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		The site practices outlined in ProPECC Note PN 1/94 should be	construction site runoff to		construction phase
		followed as far as practicable in order to minimise surface runoff	avoid pollution of water		
		and the chance of erosion. The following measures are	courses		
		recommended:			
		> Temporary site drainage facilities are to be designed and			
		implemented by the Contractor prior to commencement of			
		construction to convey surface runoff to storm drains			
		applying adequately designed silt/ sand removal traps and			
		sediment basins.			
		<ul><li>Perimeter cut-off drains shall be installed in advance of any</li></ul>			
		earthworks and site formation work to convey site runoff			
		from the works areas to the silt removal facilities.			
		> Runoff into the excavation areas during rainstorm events			
		shall be minimised as far as practicable. Any wastewater			
		pumped out of the excavation areas shall be treated to			
		remove suspended solids prior to discharge.			
		> Maintenance and inspection of the drainage system and			
		sediment removal facilities should be carried out regularly			
		to remove any sediment and blockages, especially when			
		rainstorms are forecast.			

EIA	EM&A		<b>Recommended Mitigation Measures</b>	<b>Objectives of the</b>	Implementation	Location / Duration of the
Ref.	Ref.			recommended Measures &	Agent	measures
				Main Concerns to address		
		$\blacktriangleright$	Final surface levels should be compacted and final surface			
			protections installed to prevent erosion caused by			
			rainstorms.			
		$\blacktriangleright$	Open stockpiles of material should be covered on site with			
			waterproof layers such as tarpaulin to reduce the potential			
			for sediment laden runoff entering the drainage system.			
		$\blacktriangleright$	The wheels of all vehicles and plant should be cleaned			
			before leaving the works areas to remove sediment, soil and			
			debris from the tracks. The washwater should be treated to			
			remove any suspended sediment.			
			Surface water from concrete batching areas and the rest of			
			the site should be separated as far as possible. Wastewater			
			from any concrete batching plant (if required) shall be			
			treated to the required standards including pH adjustment			
			and settlement of suspended sediments before discharging			
			to stormwater drains.			
			Manholes (including those constructed as part of the Project)			
			should be adequately covered and temporarily sealed at all			
			times to prevent silt, construction materials or debris from			
			entering the drainage system, and to prevent storm runoff			

EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		from entering foul sewers. The discharge of surface runoff			
		into foul sewers should be prevented so as not to overload			
		the sewerage system.			
		Discharges should be collected by the temporary drainage system			
		installed by the Contractor and treated on-site to remove sediment			
		prior to discharge to the off-site drainage areas. The Contractor is			
		required to obtain a discharge licence from EPD under the WPCO			
		for all discharges from site with all discharges meeting the water			
		quality requirements of the Technical Memorandum on Standards			
		for Effluents Discharged into Drainage and Sewerage Systems,			
		Inland and Coastal Waters (TM-DSS).			
5.6.1.3	4.2	Accidental Spillage of Chemicals	Prevent accidental discharge	Contractor	Within the Project site / During
		In accordance with the Waste Disposal (Chemical Waste)	of chemicals into the		construction phase
		(General) Regulation (Cap 354C), the following measures should	surrounding environment		
		be implemented:			
		> The labelling and storage of chemicals should be in			
		accordance with the Code of Practice on the Packaging,			
		Labelling and Storage of Chemical Wastes and maintained			

EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		at all times by the Contractor.			
		> Oils and fuels should only be stored in designated areas			
		which have appropriate pollution prevention control			
		facilities such as oil and grease traps.			
		> The maintenance of vehicles should only be undertaken in			
		areas of the site served by appropriate pollution prevention			
		control facilities.			
		> To prevent the spillage of fuels and solvents to nearby			
		stormwater drains, all fuel tanks and storage areas should be			
		locked and sited on sealed areas of the site, within bunded			
		areas with a capacity equal to 110% of the storage capacity			
		of the largest container. The bund should be kept free of			
		surface water at all times and after each rainfall event.			
5.6.1.4	4.2	Sewage from Construction Workforce	Prevent discharge of sewage	Contractor	Within the Project site / During
		Portable toilets should be available throughout the construction	into the surrounding		construction phase
		phase and regularly maintained, collected and disposed by a	environment		
		licensed waste collector to a public sewage treatment works for			
		suitable treatment.			
5.6.1.5	4.2	Construction Works in Close Proximity to Inland	Minimise/ control	Contractor	Within the Project site / During

EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		Watercourses	construction site discharges		construction phase
		Mitigation measures such as such as temporary diversions of	to avoid pollution of nearby		
		existing drainage culverts/ watercourses before construction	watercourses		
		commences and during construction should be implemented, in			
		addition to those listed in ProPECC Note PN1/94 Construction			
		Site Drainage and ETWB TC (Works) No. 5/2005 Protection of			
		Natural Streams/ rivers from Adverse Impacts Arising from			
		Construction Works. Measures include the following:			
		> Stockpiling of construction materials and spoil, should be			
		properly covered and located away from any natural			
		stream/river.			
		> Construction works close to the inland waters should be			
		carried out in dry season as far as practicable where the flow			
		in the surface channel or stream is low.			
		> Removal of existing vegetation alongside the riverbanks			
		should be avoided or minimised. When disturbance to			
		vegetation is unavoidable, all disturbed areas should be			
		hydroseeded or planted with suitable vegetation to blend in			
		with the natural environment upon completion of works.			

EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
Waste Ma	anagement	Implications – Construction Phase			
7.5.1.1	6.2	Good Site Practice	Implement good site	Contractor	Project construction site /
		Recommendations for good site practices during the construction	practices to minimise waste		Throughout construction stage /
		activities include:	generation		Until completion of all construction
		> Nomination of an approved person, such as a site manager,			activities
		to be responsible for good site practices, arrangements for			
		collection and effective disposal to an appropriate facility, of			
		all wastes generated at the site.			
		> Training of site personnel in proper waste management and			
		chemical handling procedures.			
		> Provision of sufficient waste disposal points and regular			
		collection of waste.			
		> Appropriate measures to minimise windblown litter and			
		dust/odour during transportation of waste by either covering			
		trucks or by transporting wastes in enclosed containers.			
		> Stockpiles of C&D materials should be kept covered by			
		impervious sheets to avoid windblown dust.			
		> All dusty materials including C&D materials should be			
		sprayed with water immediately prior to any loading transfer			

EIA	EM&A	Recommended Mitigation Measures	<b>Objectives of the</b>	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		<ul> <li>operation so as to keep the dusty material wet during material handling at the stockpile areas.</li> <li>Provision of wheel washing facilities before the trucks leaving the works area so as to minimise dust introduction to public roads.</li> <li>Well planned delivery programme for off-site disposal such that adverse environmental impact from transporting the</li> </ul>			
		inert or non-inert C&D materials is not anticipated.			
7.5.1.2	6.2	Waste Reduction Measures	Implement good	Contractor	Project construction site /
		Good management and control can prevent the generation of a	management and control to		Throughout construction stage /
		significant amount of waste. Waste reduction is best achieved at	minimise waste generation		Until completion of all construction
		the planning and design stage, as well as by ensuring the			activities
		implementation of good site practices. Recommendations to			
		achieve waste reduction include:			
		<ul> <li>Sort non-inert C&amp;D materials to recover any recyclable portions.</li> </ul>			
		> Segregation and storage of different types of waste in			
		different containers or skips or stockpiles to enhance reuse			
		or recycling of materials and their proper disposal			

EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		Encourage collection of recyclable waste such as waste			
		paper and aluminium cans by providing separate labelled			
		bins to enable such waste to be segregated from other			
		general refuse generated by the work force.			
		<ul><li>Proper site practices to minimise the potential for damage or</li></ul>			
		contamination of inert C&D materials.			
		<ul><li>Plan the use of construction materials carefully to minimise</li></ul>			
		amount of waste generated and avoid unnecessary			
		generation of waste.			
7.5.1.3	6.2	Inert and Non-inert C&D Materials	Minimise impacts resulting	Contractor	Project construction site /
		In order to minimise impacts resulting from collection and	from collection and		Throughout construction stage /
		transportation of inert C&D materials for off-site disposal, the	transportation of inert C&D		Until completion of all construction
		inert C&D materials should be reused on-site as fill material as	materials		activities
		far as practicable. In addition, inert C&D materials generated			
		from excavation works could be reused as fill materials in local			
		projects that require public fill for reclamation.			
		The surplus inert C&D materials will be disposed of at the			
		Government's PFRFs for beneficial use by other projects in Hong			
		Kong.			

EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		The C&D materials generated from general site clearance should			
		be sorted on site to segregate any inert materials for reuse or			
		disposal at PFRFs whereas the non-inert materials will be			
		disposed of at the designated landfill site.			
		In order to monitor the disposal of inert and noninert C&D			
		materials at respectively PFRFs and the designated landfill site,			
		and to control fly-tipping, it is recommended that the Contractor			
		should follow the DEVB Technical Circular (Works) No. 6/2010			
		for Trip Ticket System for Disposal of Construction & Demolition			
		Materials issued by Development Bureau. In addition, it is also			
		recommended that the Contractor should prepare and implement			
		a Waste Management Plan detailing their various waste arising			
		and waste management practices in accordance with the relevant			
		requirements of the ETWB Technical Circular (Works) No.			
		19/2005 Environmental Management on Construction Site.			
7.5.1.4	6.2	Chemical Waste	Implement good practices to	Contractor	Project construction site /
		If chemical wastes are produced at the construction site, the	avoid chemical waste impact.		Throughout construction stage /
		Contractor will be required to register with the EPD as a chemical			Until completion of all construction
		waste producer and to follow the guidelines stated in the "Code			activities

EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		of Practice on the Packaging Labelling and Storage of Chemical			
		Wastes". Good quality containers compatible with the chemical			
		wastes should be used, and incompatible chemicals should be			
		stored separately. Appropriate labels should be securely attached			
		on each chemical waste container indicating the corresponding			
		chemical characteristics of the chemical waste, such as explosive,			
		flammable, oxidising, irritant, toxic, harmful, corrosive, etc. The			
		Contractor should use a licensed collector to transport and dispose			
		of the chemical wastes at the approved Chemical Waste Treatment			
		Centre or other licensed recycling facilities, in accordance with			
		the Waste Disposal (Chemical Waste) (General) Regulation.			
		Potential environmental impacts arising from the handling			
		activities (including storage, collection, transportation and			
		disposal of chemical waste) are expected to be minimal with the			
		implementation of appropriate mitigation measures as			
		recommended.			
7.5.1.5	6.2	General Refuse	Implement good practices to	Contractor	Project construction site /
		General refuse should be stored in enclosed bins or compaction	avoid odour nuisance or		Throughout construction stage /
		units separated from inert C&D materials. A reputable waste	pest/vermin problem and		Until completion of all construction

EIA	EM&A	Recommended Mitigation Measures	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		collector should be employed by the Contractor to remove general	waste impact.		activities
		refuse from the site, separately from inert C&D materials.			
		Preferably an enclosed and covered area should be provided to			
		reduce the occurrence of 'wind blown' light material.			
Land Co	ntaminatio	n – Construction Phase			
8.6.1	7.2	In any case where contaminated soil is identified after the	Assessment is required for	Contractor	Project construction site / Before
		commencement of works, a Contamination Assessment Plan	EPD approval in any case		construction stage
		(CAP) is required to be prepared for EPD's endorsement prior to	where contaminated soil is		
		the site investigation. The Contamination Assessment Report	identified		
		(CAR) and/ or Remediation Action Plan (RAP) should be			
		prepared for EPD's approval after the site investigation. If land			
		contamination is confirmed, remediation works should be carried			
		out according to the approved RAP. A Remediation Report (RR)			
		should also be prepared for EPD's endorsement to demonstrate			
		that the clean-up of the contaminated land is completed. No			
		construction work or development of the site should be carried out			
		before the approval of the RR.			
8.6.1	7.2	The following mitigation measures are proposed for contaminated	Minimise impacts resulting	Contractor	Project construction site /
		material excavation and transportation of contaminated materials	from excavation and		Throughout construction stage /

EIA	EM&A	<b>Recommended Mitigation Measures</b>	Objectives of the	Implementation	Location / Duration of the
Ref.	Ref.		recommended Measures &	Agent	measures
			Main Concerns to address		
		(if any), in order minimise the potentially adverse effects in the	transportation of		Until completion of all construction
		health and safety of construction workers and impacts arising	contaminated materials		activities
		from the disposal of potentially contaminated materials:			
		$\succ$ To minimise the chance for construction workers to come			
		into contact with any contaminated materials, bulk earth-			
		moving excavation equipment should be employed;			
		> Contact with contaminated materials can be minimised by			
		wearing appropriate clothing and personal protective			
		equipment such as gloves and masks (especially when			
		working directly with contaminated material), provision of			
		washing facilities and prohibition of smoking and eating on			
		site;			
		> Stockpiling of contaminated excavated materials on site			
		should be avoided as far as possible;			
		> The use of any contaminated soil for landscaping purpose			
		should be avoided unless pre-treatment was carried out;			
		> Vehicles containing any excavated materials should be			
		suitably covered to reduce dust emissions and / or release of			
		contaminated wastewater;			
		> Truck bodies and tailgates should be sealed to stop any

### **Certificate of Calibration**

### Item for calibration:

Description	: Acoustical Calibrator					
Manufacturer	: SVANTEK					
Model No.	: SV30A					
Serial No.	: 24780					
Equipment No.	: N-09-05					
Test conditions:						
Room Temperatre	: 17-22 degree Celsius					
Relative Humidity	: 40-70%					

### Methodology:

The Sound Level Calibrator has been calibrated in accordance with the documented procedures and using standard(s) and instrument(s) which are recommended by the manufacturer, or equivalent.

#### **Results:**

Sound Pressure Level (1kHz)	Measured SPL	Tolerance
At 94 dB SPL	94.0	$94.0 \pm 0.1 \text{ dB}$
At 114 dB SPL	114.0	$114.0 \pm 0.1 \text{ dB}$

PREPARED AND CHECKED BY: For and On Behalf of WELLAB Ltd.

TRICK ŤSÈ

General Manager
